User 1 – Gamer

Aisha Nafy: Good evening, Shazni.

Shazni Azmath: Good evening.

Aisha Nafy: So, are you ready for today's interview about the PunkBuster Website?

Shazni Azmath: Yes, I'm ready.

Aisha Nafy: Yeah, this is your first question. Have you previously use this website, or how long have you been integrating Punkbuster into your games?

Shazni Azmath: Um, this is actually my first time visiting the Punkbuster official website. But I've been using PunkBuster for about three years. This is included in some FPS games I play.

Aisha Nafy: Yeah, so, are you currently maintaining any games with PunkBuster enabled?

Shazni Azmath: No, I don't maintain games. I just use it as a player whenever a game has a PunkBuster built in.

Aisha Nafy: Do you find PunkBuster documentation and gaming resources comprehensive?

Shazni Azmath: Honestly, it feels outdated and incomplete. Actually, it's hard to find clear step-by-step help. So, most of the time. I rely on community forums instead of this.

Aisha Nafy: What do you think about the downloads and updates of PunKBuster?

Shazni Azmath: The updates usually work fine, but the process isn't very user-friendly. It could be much clearer with better prompts and progress feedback, also.

Aisha Nafy: Yeah, so have you been in contact with the game's support team regarding PunkBuster issues?

Shazni Azmath: Yes, a couple of times I faced it. The support was very slow, actually, and its's not clear also. It was really frustrating to me. Yeah, especially when preparing for the tournaments, it should be so slow. Then I got frustrated at that moment.

Aisha Nafy: Okay, so what is your idea about the PunkBuster License inquiry?

Shazni Azmath: It feels, actually, it feels so confusing for me. The form isn't very clear, and even things like submit buttons are not visible. Actually, it looks like just a letter, right? It's not visible like an actual button. So...

I think it really needs clearer and interactive designs for the buttons and needs more visuality. Yes, Okay, so

Aisha Nafy: What do you think about the entire PunkBuster layout?

Shazni Azmath: The layout looks actually old. So, it's so old, and it looks like a very normal UI. So, navigation isn't smooth, actually. And also, it's for new users like me. It can't be clustered over helping, right? So that's the issue here. So they need more good layouts and all this.

Aisha Nafy: So, are you completely satisfied about this website? What is your idea?

Shazni Azmath: Not really. It's just in a basic level really, actually. But compared to the modern gaming platforms, it feels so outdated and so efficient. So they should improve into the current modern world websites.

Aisha Nafy: So do you have any recommendations to enhance this website?

Shazni Azmath: Yeah, sure, definitely. Yeah, they suggest so many modern designs and clear categories for the downloads and troubleshooting. So they need many more, some modern UI designs. They should include all of these things in their website.

And also adding video tutorials, FAQ sections and maybe they can add the live chat support. Would be a help to the players a lot, I think. Yeah, that's kind of things should be done it will be more useful to the users in the future.

Aisha Nafy: Thank you! For your ideas and support.

Shazni Azmath: Okay, thank you!

Aisha Nafy: Thank you!

Shazni Azmath: Welcome!

User 2 – Game Developer

Aisha Nafy: Good Afternoon, Sumayya

Sumayya: Good afternoon.

Aisha Nafy: So are you ready for the interview about the PunkBuster website?

Sumayya: Yes

Aisha Nafy: Yes, okay, let's go into the questions.

Sumayya: Okay

Aisha Nafy: My first question is, did you previously use this website, and how long have you been integrating PunkBuster into your games?

Sumayya: No, this is my first time visiting the site. I'm currently exploring anti-cheat tools like PunkBuster to see if they fit into my projects.

Aisha Nafy: Yeah. So, are you currently maintaining any games with PunkBuster enabled?

Sumayya: No, currently I'm not

Aisha Nafy: Okay. Do you find PunkBuster documentation and developer resources comprehensive?

Sumayya: Not fully, the basics are not there, but more examples and updates would tell that they cover the essentials, but the documentation sometimes feels outdated; more step-by-step integration examples would help.

Aisha Nafy: What is your idea about the PunkBuster license inquiry?

Sumayya: The license term should be explained more straightforwardly for developers. As you can see from the form, a user has to make time to fill all these out, which is frustrating. And when you see the security code and the submit buttons below, you can see that it is not visible to the user. I hope they can use an interactive user interface design.

I also noticed that there is a note mentioned on the top, which is not visible; I wish they could use validation for it.

Aisha Nafy: Yeah. So, did you find any FAQ sections for game developers? If yes, what is your idea about the page?

Sumayya: Yes, I found it, but it wasn't detailed enough. Most questions were too generic and didn't cover deeper developer integration issues.

Aisha Nafy: Were you able to find the About Us page on this website?

Sumayya: Yes, but the information was very limited. There doesn't seem to appear to be very clear labels. About Us page, though some information about Event Balance and PunkBuster exists, about their mission and support structure.

Aisha Nafy: Have you ever been in contact with the game support team regarding PunkBuster issues?

Sumayya: Yes, I have reached out a couple of times regarding false positives and server sync problems. The response was slow and also not very clear. There's no publicly available content, such as phone or support is managed via a web-based trouble ticket system.

Aisha Nafy: What do you think about the overall layout of this website? What is your idea?

Sumayya: The layout feels a bit outdated and clustered. Navigation could be much more streamlined.

Aisha Nafy: Are you satisfied with the website?

Sumayya: Not really, I guess, it works, but the design, navigation, and documentation need major improvement.

Aisha Nafy: Are there any PunkBuster features you wish to see and could improve and enhance, or edit?

Sumayya: The developer focuses FAQ covering integration, licensing and technical setup, the clearly labeled About Us page with the company and product context, and an interactive license order instead of just an email context. More thorough documentation guides tailored for developers, and a more modern, intuitive layout with better navigation and search functionality would be better

Aisha Nafy: Yeah, so really thankful for your support and your ideas. Thank you! For the interview.

Sumayya: Thank you.

Aisha Nafy: Thank you!

User 3 – Game Publisher Representative

Aisha Nafy: Good Afternoon, Hasandi

Hasandi: Good afternoon.

Aisha Nafy: Are you ready for today's interview for the PunkBuster website?

Hasandi: Yeah, I'm ready.

Aisha Nafy: Okay, this is your first question. Do you regularly visit this website for official updates or press releases?

Hasandi: Yes, I visit it occasionally, mainly when I need to verify official updates. However, the updates don't seem to be consistent with the prominence displayed on one, so sometimes I have to cross-check with other industry sources

Aisha Nafy: Yeah. Is it very easy to locate press releases and companion announcements?

Hasandi: Not really, AS you can see, the press release can be seen on the homepage but is not separately used or easy to access.

They are often buried within the site's manual sections, which makes it time-consuming to locate official announcements. And there are no filter sections for press releases to find the previous release as well.

Aisha Nafy: Are the press releases' details enough to make informed decisions about the games?

Hasandi: Only partially. Like, partially maybe. The press releases cover more core updates, but they lack deeper insights such as timeliness, detailed patch information, or compliance notes. For a publisher, these details are essential to plan communications and ensure integrity. So yeah, partially.

Aisha Nafy: Have you ever been in contact with a support system regarding Punkbuster issues?

Hasandi: Yes, I've had to reach out before to clarify certain press details. The responses were slow and often redirected me back to general documentation. For something as important as official communications, a faster and clearer response system is needed, I think.

Aisha Nafy: What is your idea about the PunkBuster license inquiry?

Hasandi: The license inquiry feels outdated and not user-friendly. For press representatives or partners, it should be more transparent with clear instructions and acceptable terms.

Instead, the form feels lengthy and hidden and not optimized for professional inquiries. And as you can see, the license page is really comprehensive, where users find it hard to fill out the form.

Which is really exhausting. And I do notice that there is no note mentioned on the top, which is not visible. I wish they could use validations for it.

Aisha Nafy: Yeah. Why do you really think about the entire website?

Hasandi: I feel like the layout looks outdated and not optimized for modern industry users. The lack of a dedicated media or press section makes it harder to quickly locate official statements or partner information.

Aisha Nafy: So, it is easy to navigate through the website to find the relevant selections for your specific needs.

Hasandi: No, not at all. Unfortunately. While it provides basic functionality, it lacks a professional, updated, and organized structure that is expected for an official anti-cheat provider. As a publisher, I need accuracy and quick access, which this site doesn't fully deliver, I think.

Aisha Nafy: Can you recommend me some ways to enhance this website?

Hasandi: Yeah, several ideas came to my mind. So, the first of which is to have a dedicated press or media section with clear updates, release archives, and contact details, and also structured announcements [age with filters for developers, publishers, and players.

And some more transparent license information with an easy-to-read summary, maybe, and a modernized layout, which would be useful with improved navigation and search functions, and also faster and more professional response channels for press and publishing representatives. These are my suggestions.

Aisha Nafy: Thank you for that. And thank you for helping us with this interview today.

Aisha Nafy: Thank you for your time, too.

Hasandi: Thank You!

Usability Issues Identified by the Students

User 1 – Gamer

- Clustered outdated homepage layout
- Outdated layout and poor navigation with limited options
- No search functions
- Confusing License inquiry
- Unclear download and update process
- Outdated documentation and gamer resources are incomplete
- Language clarity issues
- Slow and Unclear Response

User 2 – Game Developer

- Incomplete developer documentation
- Limited information for the About page
- Insufficient FAQ for developers
- Confusing license inquiry form
- Unclear and slow support system
- Lack of transparency in updates and licensing page
- Poor developer onboarding experience
- Poor user experience and user interface

User 3 – Game Publisher Representative

- Inconsistent and difficult to locate official press releases and announcements
- Limited details in the press release
- Navigation challenges
- Slow and unclear support for press queries
- Outdated and confusing license inquiry process
- Lack of personalized or role-specific resources
- Outdated layout and poor navigation
- Lack of transparency and professionalism

Variants of the interface

	F&Q Page	Version 01	Version 02	Version 01

Justification of the variants

IT23321236 Nafv FA

Interface Name – Press Release news

Version 1	Version 02
Pros: • Clear and compelling hero section with featured story and popular posts. • Strong information hierarchy separating “Latest News,” “Recent Articles,” and “Game-Related News.” • Extra features: search bar, subscription box, popular posts sidebar. • Engaging layout with visual variety (images + text). • Highlight key updates immediately, giving context at first glance.	Pros: • Compact design with less scrolling required. • Simple and straightforward layout that is easy to skim. • Minimalist approach reduces cognitive load for users who want quick updates. • Fast loading potential (lighter design, fewer elements). • Easy to implement and maintain for developers. • Reduces distraction—focus stays only on the articles.
Cons: • May overwhelm first-time users due to many features on one page. • Potentially slower load time with more elements. • Design complexity increases maintenance efforts.	Cons: • No introductory text or hero section • Lacks filtering and sorting options • Poor information hierarchy • Basic layout • Poor visual hierarchy, no clear “hero” or standout story. • It feels too plain and unengaging. • Weak information structure sections blend • No interactive features like subscription or popular posts.
Justification: ➤ In Version 01, introduced a clear hero section that highlights the latest story and popular posts, added a search bar for quick navigation, and provided subscription options for continuous engagement. The use of sections such as 'Recent Articles' and 'Game-Related News' improves information hierarchy, while the structured layout gives a sense of clarity and purpose. This design enhances the user experience by guiding visitors more effectively and reducing.	

Interface Name – License

Version 1	Version 02
Pros: • Clear and professional layout with clear spacing. • Dedicated License Inquiry form for user engagement (Name, Email, Message). • Clear sectioning of content with headings like Grant of License, Restrictions, Ownership, Termination, Warranty Disclaimer, and Limitation of Liability. • “Need Help?” call-to-action at the bottom is more visible with buttons. • Overall design feels complete and user-friendly for formal/legal content.	Pros: • Minimal and compact design requires less scrolling. • Faster load potential due to fewer elements. • Clean, distraction-free reading experience. • Simple “Need Help?” section with clear options (Visit Support, Contact Us). • It is easier for developers to maintain.
Cons: • Requires more vertical scrolling (especially with the inquiry form). • Higher maintenance effort for developers.	Cons: • No inquiry form reduced user engagement opportunities. • Feels too plain and less professional. • Weak visual hierarchy, everything blends. • Lack of contextual elements makes the page feel incomplete. • Limited opportunities to capture user input or feedback.
Justification: ➤ In Version 01, implemented a professional layout with well-defined sections such as Grant of License, Restrictions, Ownership, Termination, Warranty Disclaimer, and Limitation of Liability. The inclusion of a dedicated License Inquiry form encourages user engagement by allowing users to submit their Name, Email, and Message directly. The “Need Help?” call-to-action is prominent, improving accessibility to support. This structured and complete layout enhances user trust and guides visitors clearly through formal/legal content, although it requires more vertical scrolling and may feel slightly crowded due to the form and detailed sections.	

Interface Name – Careers / Join US

Version 1	Version 02
Pros: • Clear and compelling section with introductory text (“Shape the Future, Join Our Team”). • Strong information hierarchy with structured sections: Open Positions, Testimonials, Team Gallery, and Culture & Values. • Team Gallery adds a human and engaging touch. • More content richness – offers context, stories, and visuals for candidates. • Encourages user engagement with multiple CTAs (Apply buttons, testimonials, culture section, gallery).	Pros: • Compact design with less scrolling required. • Minimalist layout that is simple and easy to skim. • Fast loading potential due to fewer elements. • Easy to implement and maintain for developers. • Reduced distraction – user focus stays mainly on job postings and testimonials.
Cons: • May overwhelm first-time visitors due to amount of content • Potentially slower load time with added images (Team Gallery). • Higher maintenance effort with more sections.	Cons: • No introductory hero section or contextual messaging. • Lacks interactive/visual engagement (no gallery, fewer visuals). • Weak information hierarchy – sections feel basic and similar in weight. • Too plain and unengaging – may fail to inspire applicants. • Culture & Values section feels secondary and not highlighted strongly.
Justification: ➤ In Version 01, introduces the team vision and mission, supported by structured sections like Testimonials, Team Gallery, and Culture & Values. This creates a rich and engaging candidate experience while highlighting company culture and opportunities clearly. It guides users more effectively but requires more scrolling and maintenance effort.	

Interface Name – Support / contact

Version 1	Version 02
Pros: • Full support form with fields for detailed issue submission. • Clear contact options (form + alternative support link). • Strong information hierarchy with sections separated distinctly. • Provides immediate action paths for users needing help.	Pros: • Compact layout with minimal scrolling. • Clean and simple design focused on the support form. • Straightforward submission process without extra clutter. • Easier for quick, single-action use.
Cons: • Larger contact form takes up more space. • Requires more scrolling to view all elements. • Slightly heavier in visual density.	Cons: • Lacks introductory context (no guidance for type of support). • No multiple channels for support (only the form). • Information hierarchy is weaker, sections blend together. • Less engaging, feels plain
Justification: ➤ Version 1 provides a richer and more complete support experience by combining a detailed contact form and multiple support options, helping users find solutions faster. ➤ Version 2 is simpler and faster for basic queries but sacrifices guidance, structure, and multiple contact options, making it less effective for comprehensive support.	

Interface Name – About US

Version 1	Version 02
Pros: • The section with company vision and mission upfront. • Structured layout: About, Core Offerings, Team, Testimonials. • Richer content with visual elements (cards, images, team/gallery). • Engaging and storytelling-oriented design.	Pros: • Compact and easy-to-scan page. Straightforward design that communicates core content quickly. • Clean and minimal layout reduces distraction. • Faster loading potential due to fewer elements.
Cons: • Requires more scrolling due to multiple sections. • More elements may feel crowded. • Higher maintenance effort for developers	Cons: • No introduction or storytelling elements. • Lacks depth (team/gallery/testimonials removed). • Poor information hierarchy; sections look flat. • Unengaging, less appealing for first-time visitors.
Justification: ➤ Version 1 offers a richer brand experience with vision, mission, and team sections, making it more effective in building trust and engagement ➤ Version 2 focuses only on core text, which is efficient but uninspiring, and misses opportunities to showcase company culture and identity	

Interface Name – Community Forum

Version 1	Version 02
Pros: • Clear filtering and sorting tools. • Strong information hierarchy with sidebar navigation. • Provides more context and ease of browsing across topics	Pros: • Simpler, cleaner layout with minimal elements. • Easy to skim quickly for latest posts. • Compact design reduces cognitive load. • Faster performance due to fewer features
Cons: • More complex interface may overwhelm new users. • Requires more scrolling to browse multiple categories. • Heavier visually and requires more development effort.	Cons: • No filtering or advanced browsing tools. • Weak hierarchy—topics feel flat and not well-structured. • Too plain, not engaging. • Limited community-building feel compared to Version 1.
Justification: ➤ Version 1 emphasizes structure and functionality with multiple categories, filters, and navigation, which fosters stronger community interaction. ➤ Version 2 simplifies the forum to a minimal list, which is efficient but fails to support deeper browsing or engagement.	

Interface Name – Login

Version 1	Version 02
Pros: - Includes branding (logo) and a short welcome text, which creates a more professional and user-friendly first impression. - Offers Google sign-in option, giving users a faster way to log in without remembering passwords. - Provides “Don’t have an account? Sign up” link, guiding new users smoothly to registration. - Displays terms of service and privacy policy notice, improving trust and legal clarity.	Pros: - Very minimalist and straightforward design, making it quick for users to log in without distractions. - Fewer elements mean faster load times and simpler navigation.
Cons: - More elements may make the interface look slightly busy compared to Version 2. - Extra content could slow down users who prefer a very fast login process.	Cons: - No Google sign-in option, which reduces convenience for users who expect social login. - Missing sign-up link, which may confuse new users and force them to return to the homepage. - Lack of branding and trust elements (logo, policies) makes it feel less professional.
Justification: Version 1 offers a feature-rich and user-centered login experience, balancing usability, accessibility, and professionalism with branding, alternative login methods, and legal transparency. Version 2 emphasizes simplicity and speed, but sacrifices convenience and trust-building features that are standard in modern login pages. - The better choice depends on the goal: if the aim is to reduce barriers to logging in quickly, Version 2 is better. But if the priority is professionalism, user trust, and flexibility, Version 1 is the stronger option.	

Interface Name – Sign in

Version 1	Version 02
Pros: • Provides Google sign-in option, allowing quicker registration for users who prefer social login. • Includes a phone number field, giving flexibility for account recovery or multi-factor authentication. • Contains a clear call-to-action button (“Sign up for PunkBuster”), which feels more engaging. • Adds helpful links such as “Already have an account? Login” and terms of service notice, improving usability and transparency.	Pros: • Minimalist design with only essential fields (name, email, password, confirm password), making it quick and simple to complete. • Cleaner layout with less visual distraction, easier for users who prefer speed over detail.
Cons: • Slightly more complex as it requires additional fields (like phone number). Longer form may discourage some users from completing the sign-up	Cons: • No social sign-in option, which could make registration feel slower compared to modern standards. • No phone number field, which reduces options for security or recovery. • Missing helpful elements like terms of service note or login link, which could cause confusion.
Justification: ➤ Version 1 offers a feature-rich and professional registration process, balancing usability with security and modern expectations (Google sign-in, phone number, login link, policies). ➤ Version 2 focuses on simplicity and speed, but at the cost of reduced functionality and fewer user conveniences. ➤ The choice depends on goals: if the priority is user trust, security, and flexibility, Version 1 is better. If the priority is fast and barrier-free sign-up, Version 2 works best.	

Interface Name – Home page

Version 1	Version 02
Pros: • The homepage highlights featured games in a grid format, making it more visually engaging and helping users quickly explore popular titles. • Includes a PB News section, which keeps players updated on the latest gaming developments. • The PB Setup instructions give users step-by-step guidance, improving usability for new visitors. • More detailed content areas (games, news, setup) create a comprehensive first impression.	Pros: • A cleaner, simpler layout with fewer elements makes it easier for users to quickly identify sections. • White space improves readability and focus, reducing visual overload. • Featured games and news are still present, but in a more compact form, which may be less intimidating for new users.
Cons: • The layout may feel a little crowded because of multiple content blocks. • New users may take longer to scan and understand all the available options.	Cons: • Lacks detailed guidance for PB Setup (only shown as a link), which may confuse first-time users. • The reduced emphasis on news and featured games makes the homepage feel less engaging compared to Version 1. • May require users to navigate deeper into the site to find detailed information.
Justification: • Both versions maintain consistency in branding with the same header, footer, and navigation. • Version 1 focuses on rich content and user engagement by presenting more information upfront, making it better for users who want detail immediately. • Version 2 prioritizes simplicity and readability, which is beneficial for users who prefer a minimal design without distractions. The choice depends on the target audience: if the site aims for professional appeal and detail, Version 1 is better. If the aim is ease of use and accessibility, Version 2 is more effective.	

Interface Name – Games Page

Version 1	Version 02
Pros: • Clear and compelling hero section with a title. • Advanced filtering options. • Superior information hierarchy; uses font size and weight effectively to guide the user's eye through the content. • Better use of space; the layout feels structured and intentionally designed.	Pros: • Simple and straightforward layout that is easy to scan quickly. • Clean visual design with consistent card styling for the featured games. • Adequate information presentation: all necessary games and support status details are present.
Cons: • The contact form is large • Less modern visual styling	Cons: • No introductory text or hero section • Lacks filtering and sorting options • Poor information hierarchy • Basic layout
Justification: ➤ Version 1 is more functional and user-friendly. The addition of filter and sort options allows users to easily find the games they care about, which is the main goal of this page. ➤ It provides better context. The hero section immediately tells users why they are on the page and what PunkBuster does for these games. ➤ The design is more modern and organized	

Interface Name – PB Setup Page

Version 1	Version 02
Pros: • Excellent visual structure and flow make the guide easy to follow. • Superior information presentation, which is very easy to read and compare. • Strong visual hierarchy. More engaging layout.	Pros: • Compact design that shows all information on the screen without scrolling as much. • Simple text-based layout that is straightforward to implement.
Cons: • The design requires more vertical space, meaning users will need to scroll more to see all content.	Cons: • Poor visual structure. • Weak information hierarchy. • Ineffective presentation. • Less user-friendly.
Justification: ➤ Version 1 is much easier to follow. The clear separation of each step with images makes the setup process feel simple and manageable, which is less stressful for the user. ➤ Information is presented more clearly. ➤ The design is more modern and helpful. A good guide should break down complex tasks.	

Interface Name – FAQ

Version 1	Version 02
Pros: • Comprehensive and self-contained; includes a full contact form for immediate user action. • Logical information hierarchy with clear, descriptive section headers • Provides multiple, clear channels for support Proactive by featuring "Recently Asked Questions" at the top.	Pros: • Very clean and minimalistic design, reducing visual clutter. • Simple, scannable list of questions under each category. • Consistent and simple visual language Ample whitespace, making the page feel open and easy to read..
Cons: • The contact form is large • Less modern visual styling	Cons: • Lacks a direct call-to-action • No immediate help options • Missing key features • The design, while clean, is too sparse and fails to utilize the page space effectively to assist users.
Justification: ➤ While Version 2 has a more modern and minimalist aesthetic, Version 1 is the superior and more effective FAQ interface. ➤ It solves problems faster. The "Recently Asked Questions" section at the top quickly answers common problems right away. ➤ It's easier for the user. Everyone can find what answers they need or a way to contact support all in one place.	

How the best design was selected

IT23321236 Nafy F A

Interface Name – Press Release news

- Version 1 was selected because it presents a clear and structured news layout, aligning with the main purpose of the page, engagingly delivering press releases and updates.
- The design includes a hero section highlighting key news or featured stories, which immediately grabs user attention and gives context.
- It uses a strong information hierarchy, separating “Latest Releases,” “Featured Posts,” and “News Categories,” which allows users to scan content effectively.
- Filtering and sorting options (such as date and category) are available, making it easy to navigate through a large collection of press releases.
- The layout balances text and visuals, so the content doesn’t feel overwhelming and is more approachable for readers.
- This structure provides a professional yet user-friendly experience, ensuring that both casual visitors and media professionals can find and understand important updates efficiently.

Interface Name – License

- Version 1 was chosen as it is clear, formal, and well structured, which is vital for legal and informational content.
- The license agreement is presented in well-defined sections with headings, making it easy for users to locate specific clauses.
- Key sections like “Terms of Use,” “Restrictions,” and “Acceptance” are broken down logically instead of being presented as a long, overwhelming block of text.
- Version 1 includes a checkbox and clear call-to-action buttons (“Accept” / “Decline”), ensuring that users can interact with the agreement straightforwardly.
- The layout has ample white space and proper typography, reducing cognitive load and making legal text less intimidating.
- By presenting information in a step-by-step and confirmable manner, the design improves trust and ensures that users actually read and understand the license before proceeding.

Interface Name – Careers / Join US

- Version 1 was selected because it is engaging, modern, and purpose-driven, supporting the goal of attracting potential employees.
- The design opens with a hero section introducing the company’s culture and vision, which inspires users and makes them feel welcomed.
- It clearly divides information into sections like “Open Positions,” “Employee Testimonials,” and “Our Culture & Values,” so users get both practical (jobs) and emotional (work culture) insights.
- Visual hierarchy is applied effectively: job listings are prominent, while supporting sections like testimonials and culture are secondary but still visible.
- The presence of employee voices and cultural highlights adds credibility and trust, making applicants more likely to apply.
- The overall design is both professional and inviting, aligning well with the recruitment objective of the page.

IT23321618 Rathnayaka R.M.N.P.D.

Interface Name – Support / Contact

- Version 1 was selected because it merges support and contact features into a unified and user-friendly design.
- The page provides quick access to frequently asked questions as well as direct contact options (email, phone, and form), reducing the need to navigate multiple pages.
- Information is organized logically: FAQs at the top for self-service, and direct contact options below for cases requiring personal assistance.
- The layout includes a clear hierarchy of headings and sections, ensuring that users can easily find help without confusion.
- By combining support and contact, the design minimizes user frustration and ensures efficiency in resolving issues.
- This design supports different user preferences by offering multiple channels of assistance in one place.

Interface Name – About US

- Version 1 was chosen as it provides a professional and structured representation of the company's identity and values.
- The design includes a hero section with a clear mission statement, giving users an immediate understanding of the organization's purpose.
- Sections such as "Our Story," "Mission & Vision," and "Leadership Team" are distinctly highlighted, improving content readability.
- Visual hierarchy and spacing make the information engaging without overwhelming the reader.
- The inclusion of imagery or placeholders for team members and milestones adds credibility and a personal touch.
- Overall, this layout enhances trust, builds connection, and effectively communicates the organization's brand image.

Interface Name – Community Forum

- Version 1 was selected because it fosters engagement and collaboration, aligning with the purpose of a community hub.
- The design has a structured layout with categories, subcategories, and recent discussions, making it easy for users to navigate.
- Prominent search and filtering tools allow users to quickly find topics of interest or previously answered questions.
- Clear call-to-action elements such as "Start a Discussion" or "Reply" encourage participation and interaction.
- User profiles, timestamps, and interaction metrics (likes, replies, views) are integrated to create transparency and trust in the community.
- By combining structure with interactivity, the design ensures that users feel part of an active and helpful community space.

Interface Name – Login

- Version 1 includes branding, welcome text, and policy links, which build trust and create a professional first impression for users.
- The presence of a Google sign-in option allows faster login and caters to modern user expectations.
- By providing a “Sign up” link directly on the page, Version 1 helps new users easily register without having to search for the option.
- The layout is well-organized and avoids excessive empty space, ensuring a balanced design.
- The user-friendly arrangement improves navigation and ensures a smooth login experience.
- Version 1 prioritizes user convenience and accessibility, making it more effective and reliable compared to Version 2.

Interface Name – Sign in

- Version 1 offers a more complete sign-up experience by including social login options, a phone number field, and links to terms and conditions.
- The design is user-friendly, allowing visitors to choose between fast Google sign-in or detailed form filling depending on their preference.
- By including additional fields such as phone number, Version 1 enhances security and account recovery options.
- The “Already have an account? Login” link ensures better navigation and reduces confusion for returning users.
- Version 1 makes better use of space by providing all necessary options in one place while still maintaining clarity.
- This user-centered design gives more flexibility and control to users, improving the overall usability of the sign-up process.

Interface Name – Home page

- Version 1 provides a user-friendly layout with clear sections for featured games, PB news, and PB setup instructions, helping users easily access important information.
- The design uses space effectively by balancing content blocks, reducing unnecessary white space, and keeping the page visually appealing.
- By providing detailed guidance and updates, Version 1 helps new users understand the platform without confusion.
- The structured presentation of content improves the user experience by making the homepage more informative and engaging.
- Version 1 enhances professionalism and trust by presenting comprehensive details upfront, which is important for first-time visitors.
- The design remains organized and easy to navigate, minimizing user frustration and supporting smooth interaction.

Interface Name - Games Page

- Version 1 was selected because of its modern and practical design, it is useful because of the main purpose of the page to assist users in locating games.
- The design has very strong filtering capabilities ("Platform" , "Sort by"), so that the user can narrow down the results, and it becomes simple to navigate through a large library of games.
- It gives a good background and has a concise and effective hero segment explaining why PunkBuster would be valuable in the named games.
- Version 1 is using more visual hierarchy and space in a better way, therefore making the layout more structured and deliberately organized to scan.
- The information is divided into distinct logical parts ("Featured Games"), and the user is naturally engaged in the information.
- The full-fledged and organized view makes access to information easy, and the user experience is satisfactory and simple.

Interface Name - PB Setup Page

- Version 1 was chosen because it was clear and well laid out, which is important in a step by step instructional guide.
- The design sub-divides the process of setting up into very different and visually distinct steps which makes the task appear easy and manageable to the user.
- It has a powerful visual hierarchy with numbered headings and image placeholders to establish an intellectual, user-friendly tutorial structure.
- In version 1, most important data such as the system requirements are contained in clean table format that is much easier to read and understand compared to text paragraphs.
- The design lowers the stress levels of its user since a process that would have been difficult to understand is now presented in a linear sequence that is easy to follow.
- Proper utilization of visual elements of design helps users to successfully go through the setup process and achieve the main objective of the page.

Interface Name - FAQ Page

- Version 1 was chosen due to the extensive nature of its design, which serves as an all-in-one self service center with the primary purpose of a support page.
- The design is also effective in solving user problems and providing direct contact and support information on the page without having to leave the page.
- Version 1 is very assuring, as it contains a section of frequently asked questions (Recently Asked Questions), where the answer is given on the spot.
- It offers various, open support channels (email, phone, ticket form) in such a way that users can easily access the support through a channel that the comfortable with.
- The hierarchy of information and headings in sections keep the page easy to navigate and read and user frustration is minimal.
- The user-friendly nature of version 1 makes it a more useful and painless experience than the minimal but less useful one

Figma (Used to design UI/UX for HCI assignment 2)

Figma is a cloud-based collaborative interface design tool widely used by designers, developers, and product teams. It enables users to create, prototype, and iterate on user interfaces for web and mobile applications in real time. As a browser-based platform with desktop and mobile support, Figma allows seamless collaboration, where multiple team members can work on the same project simultaneously. It provides an extensive set of features including vector editing, prototyping, version history, and built-in design systems. Figma's intuitive interface, integration with popular tools, and ability to share live design links make it ideal for both individual designers and large teams. With its versatile toolkit and collaborative capabilities, Figma streamlines the entire design workflow from brainstorming to high-fidelity prototypes
